DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 6, 8 and 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sonoda(JP 55-134816) in view of Berry(5,835,289) and Moore(4,720,804).

As to claims 6, 8 and 10-11, Sonoda teaches an optical observation instrument (microscope) that includes at least one eyepiece having an intermediate image plane (6)(see figures 1-6 and abstract) and a device(light emitting display device) being arranged in the intermediate image plane(6) for displaying information relating to the adjusted instrument parameters, the current operating state and/or the object to be observed in a visually perceptible manner (see figures 1-5 and abstract).

Sonoda fails to disclose a detachable mounted eyepiece, a display device is an LED or LCD coupled to a control electronics.

Application/Control Number: 10/030,838

Art Unit: 2629

Berry teaches an optical instrument having a removable mounted eyepiece(see figures 1-2, 6; column 2, lines 49-68 and column 3, lines 1-12). It would have been obvious to have modified Kojima with the teaching of Sonoda, so it would be more convenience for users to change and repair the eyepiece and the intermediate plane when it get damage.

Moore teaches a self-illuminating EL display or LED display(other display) or LCD display with background illumination which is connected to control electronics(see figures 1-2, 3, 6, 11, 13-14; column 3, lines 13-20; column 7, lines 61-68; column 8, lines 1-31; column 10, lines 42-68; column 11 and column 12, lines 48-68). It would have modified Sonoda as modified with the teaching of Moore, since Sonoda has disclosed a display device and an EL display or LED display or LCD having light weight, small volume and lower power consumption.

As to claim 8, Sonoda as modified teach a plurality of control electronics are integrated in the eyepiece tube and are connected by control lines and supply lines to a central operating device and supply device of the observation instrument(see Moore's figures 1-2; 13-14; column 5, lines 19-68; column 6, lines 1-32; column 12, lines 48-68; column 13, lines 12-68 and column 14, lines 1-54).

As to claims 10 and 11, Kojima as modified by Berry teaches the eyepiece being constructed to be detachably mounted on a microscope and having a shape, size and fastening means is a same manner which is same as an eyepiece not having in the device, sot that the eyepiece with the device can be exchanged with an eyepiece

Art Unit: 2629

without the device(see Berry's figures 1-2; abstract; column 2, lines 61-68 and column 3, lines 1-12).

Response to Arguments

3. Applicant's arguments with respect to claims 6, 8 and 10-11 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Vonusa et al(4,274,092) teaches a microscopic optical instrument having an eyepiece and the display unit attached to the eyepiece and incorporates therein an LED display.

Kawachi et al teach an exchanging eyepiece.

Aizaki et al(US 2002-0075563) teaches a microscope having a display device.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lun-yi Lao whose telephone number is 571-272-7671. The examiner can normally be reached on M-F.

Application/Control Number: 10/030,838
